

Moises Jaber | Data Scientist

Guadalajara, Mexico

jaber.moises@gmail.com | (+52) 322-182-4216

www.linkedin.com/in/moisesjaber | <https://github.com/JaberMoises>

Mechatronics Engineer focused on data analysis and continuous improvement. Experienced in process automation, KPI analysis, and data-driven decision-making using **Python, SQL, Excel (macros), and Visual Basic**.

PROFESSIONAL EXPERIENCE

PRODUCT ENGINEER | ASSA ABLOY

Dec 2022 – Present

- Led sustaining team (2+), ensuring operational continuity and engineering change management.
- Reduced production issues (~15–25%) by identifying patterns in non-conformity data.
- Implemented KPI-driven improvements, increasing operational efficiency.
- Automated reporting in Excel (VBA), reducing manual workload by ~40%.
- Coordinated manufacturing gauge development and communicated insights to cross-functional teams.

PRODUCT ENGINEER | COPRECI

Feb 2022 – Dec 2022

- Validated product designs using test data, improving product quality.
- Compared configurations to optimize product performance.
- Standardized components, reducing process variability.
- Collaborated with global teams and communicated data-driven insights.

MECHANICAL DESIGNER | DESA TEST SYSTEMS

Dec 2020 – Dec 2021

- Validated system performance using EOL/ICT data and FEA simulations.
- Generated technical reports to support decision-making.
- Optimized designs, reducing rework.

PRODUCT ENGINEER | OFIPLAN

2016 – 2018

- Delivered custom product solutions and reengineering improvements that enhanced functionality.

MECHANICAL DESIGN ENGINEER | CENTURY PANIFICACIÓN

2014 – 2016

- Developed 3D models and resolved overdesign issues, improving equipment performance.
-

TECHNICAL SKILLS

- **Programming & Tools:** Python, SQL, Google Colab
 - **Data Analysis:** Exploratory Data Analysis (EDA), Data Cleaning & Preprocessing, Data Aggregation
 - **Libraries & Frameworks:** Pandas, NumPy, Matplotlib, Plotly, SciPy
 - **Statistics & Modeling:** Inferential Statistics, Hypothesis Testing (Z-test, p-value analysis), Statistical Analysis
 - **Data Visualization:** Data Storytelling, Dashboarding, Visual Analytics
 - **Business & Analytical Skills:** Data-Driven Decision Making, Market Analysis, Revenue Optimization, Trend Analysis
-

EDUCATION

Mechatronics Engineering
Universidad de Guadalajara | 2010 – 2014

Data Science Bootcamp
TripleTen | 2026

LANGUAGES

Spanish (Native) | English (Upper Intermediate)

PROJECTS

Project Name: Sprint 5 | Megaline Plan Profitability Analysis

Brief Description: Analyzed Megaline user consumption patterns to evaluate the profitability of ‘Surf’ and ‘Ultimate’ plans, providing data-driven recommendations to optimize revenue and customer satisfaction.

Skills and Technologies Used: Python, Pandas, NumPy, Matplotlib, SciPy, Data Cleaning & Preprocessing, Data Aggregation, Exploratory Data Analysis (EDA), Hypothesis Testing.

Achievement or Impact: Identified ‘Ultimate’ as the highest revenue-generating plan per user with stable income patterns, while ‘Surf’ showed high revenue variability driven by data overages; confirmed statistically significant differences in average revenue across plans and regions, enabling pricing and marketing strategy optimization to maximize revenue.

Link: [JaberMoises/TripleTen-Projects: Repo for scholar projects](#)

Project Name: Sprint 6 | Video Game Market Analysis

Brief Description: Analyzed global video game market trends (2006–2016) to identify profitability patterns across platforms, genres, and regions, supporting data-driven product launch strategies with 2017 projections.

Skills and Technologies Used: Python, Pandas, Matplotlib, SciPy, EDA, Data Visualization, Hypothesis Testing (Z-test).

Achievement or Impact: Identified top-performing platforms (PS4, PC, X360, PS3) with 5–7 year life cycles, found moderate correlation between critic scores and sales (low impact from user reviews), defined regional preference patterns (e.g., Japan vs. Western markets), and validated statistically significant differences in user ratings across platforms and genres—enabling targeted, data-driven release strategies.

Link: [JaberMoises/TripleTen-Projects: Repo for scholar projects](#)

Project Name: Sprint 8 | Taxi Analysis in Chicago

Brief Description: This project conducts an exploratory and statistical analysis to understand taxi trip patterns in Chicago, identifying key market players, the geographic distribution of demand, and the impact of weather conditions (rain) on trip duration to O'Hare Airport.

Skills and Technologies Used: Python, pandas, plotly.express, scipy.stats, SQL, Data Analysis, Inferential Statistics, Data Visualization, Hypothesis Testing.

Achievement or Impact: A high concentration of taxi demand was identified across specific zones and companies, and it was demonstrated that rainy conditions significantly increase the average duration of trips from the Loop to O'Hare. These findings are relevant for operational planning and travel time estimation under adverse weather conditions.
